A Detectability ratio: median over the targets of each 5-mm depth bin
dense OPM array (208 sites)
site-matched OPM array (98 sites)
IQR over targets (primary)
95 % interval of the bin median
sensor noise only
sensor plus brain noise (primary)
sensor, brain and room noise, room field projected out
Detectability ratio, OPM over Neuromag (306 channels), log scale
D (dB)
targets per bin
222 1,221 1,590 1,336 955 707 596 431 275 207 118
B Signal only: peak field of the OPM array over the best Neuromag magnetometer, median per bin
dense OPM array (208 sites): median, IQR (shaded) and 95 % interval
site-matched OPM array (98 sites): median, IQR (shaded) and 95 % interval
sphere, standoffs 7.0 / 29.8 mm (real medians, OPM / Neuromag)
sphere, standoffs 0 / 18 mm (Jas et al.)
Peak-field ratio, OPM over Neuromag magnetometer, log scale
dB
Depth below the scalp (mm; distance to the nearest scalp point; 10-nAm cortical-normal dipoles)
